Research Project 2024

Expectations of the Final Year Research Project

- Develop a solution to a (complex) real world problem that addresses needs of real users.

- You are generally expected to develop a prototype of your solution and also publish a research paper highlighting the novelty of your solution.

- Some projects are more Product Oriented and these can compete in competitions like NBQSA, e-Swabhimani and some ore more Research Oriented.
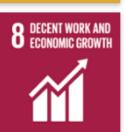

How to find a real world project

Research Project 2024 – Specific to your Batch

- Form groups of four within your own specialization.
  - This will help you to develop a solution and publish research papers that is related to your field of specialization.

- Research in not about using AIML

- For the problem you wish to tackle
  - Identify what is out there already as products
  - Are there research papers published that highlight how others have tackled this problem.
  - Ensure you are covering aspects of your given specialisation.
  - Find a novelty based on your review of what is out there and with a supervisor's guidance try to find a good usabale solution that actual users can use.
  - You can publish about your novelty as your research output.

Support for Research, Finding a good Project

- Your Departments, Specializations Coordinators will develop guidance documents about expectations.

- Supervisors might have some good projects that they may want to do.

- When reaching out to supervisors, please write a clear email with your interests. Be open to suggestions given by them.
